## Parts Identification

## Assembly & Installation

The FullStop® Saracen Ultra hitch lock can be fitted when your caravan is hitched or unhitched. It is designed to fit AL-KO AKS2004 & AKS3004 stabiliser couplings.

1. Slide the Receiver Back Plate (2) onto your AL-KO stabiliser coupling. There is a recess in the casting (see diagram 10a).
2. Fit the Receiver Cover Plate (3) onto the Receiver Back Plate (2). Line up the holes and secure with the three Receiver Plate Securing Screws (6) using a crosshead screwdriver (see Diagram 10b).
3. If not already installed, screw in the Hex Grub Screw (8) into the Main Body (1) but only by a few threads at this stage
4. Locate the Lock Portion (4) into the Main Body (1). Line up the groove in the side of the knurled section of the lock with the Hex Grub Screw (8). Insert the lock into the main body and tighten the Grub Screw (8). The grub screw retains the lock in the Main Body but still allows the lock to slide in and out of the tube.

## Fitting when Hitched

5. Insert one of the Keys (5) into the lock, push and turn 90° degrees clockwise to release the ball-bearing mechanism.
6. Locate the Main Body (1) over the handle of the coupling at approximately a 45° degree angle (see diagram 11a).
7. With the Lock Portion (4) fully retracted from the Main Body tube, pivot the Main Body (1) over the Receiver assembly (2,3). Use the Key to hold the Main Body assembly.
8. Push the lock into the tube on the Main Body. The lock will then locate into the receiver tube.
9. Lock the hitchlock by turning the key 90° degrees counter-clockwise. If the key will not turn it means that the lock is not properly located into the receiver and you will need to re-adjust the positioning and the Main Body (1) and the Receiver assembly (2,3).

## Fitting when Un-hitched

10. The only difference when fitting the hitchlock when the caravan is unhitched is that the Security Tow Ball (9) must be inserted into the coupling to inhibit the coupling from use.

## Maintenance

Spray the outside of the lock body with a light oil such as WD-40 or equivalent every sixteen weeks.
